enlighten™
LASER TATTOO REMOVAL

Q: WHAT IS ENLIGHTEN?

Introduced in 2014, enlighten™ is the most advanced laser system for the effective and safe removal of tattoos and benign pigmented lesions.

Q: HOW DOES ENLIGHTEN LASER TATTOO REMOVAL DIFFER FROM OTHER LASER TATTOO REMOVAL OPTIONS?

enlighten features extremely short and high-power *picosecond* laser pulses which efficiently and quickly break down the ink particles in tattoos. A 'picosecond' is one-trillionth of a second, and is 1,000 times shorter than the 'nanosecond' pulses used in existing lasers for tattoo removal. Picosecond laser pulses have been shown to remove tattoos more completely and in fewer treatment sessions than traditional laser used historically in the past.

HOW DOES ENLIGHTEN COMPARE?

The below image shows a split study of a tattoo. The right side of the tattoo was treated by a traditional tattoo removal laser and the left side was treated by enlighten. Post 6 weeks following the third treatment the side treated by enlighten showed better clearance over the side treated by the traditional laser tattoo removal.

Q: HOW MANY TREATMENT SESSIONS ARE REQUIRED?

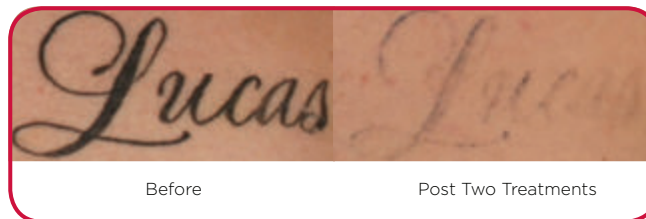

The total number of treatments vary depending on the composition, depth and the color of the ink, as well as the size of the tattoo. You should be prepared for multiple treatment sessions, and your provider can give you a better idea of the total number of treatments needed during your consultation and once your treatments begin.

Q: WHY ARE MULTIPLE SESSIONS REQUIRED?

Tattoo ink is deposited deep in the skin. In order to reach all of the ink in the skin, multiple treatment sessions are needed for clearance. Depth, size and color of the tattoo also impact the number of treatments needed.

Q: WILL THE TATTOO COMPLETELY DISAPPEAR?

In many cases, yes. However, it is very important to know that some ink colors are more difficult to clear than others. Consult with your enlighten provider to determine if enlighten is right for you.

Q: IS THE PROCEDURE PAINFUL?

Patients compare the procedure to a rubber band being snapped against their skin. Topical or local anaesthetics may be available from your provider to minimize discomfort.

Q: ARE THERE ANY SIDE EFFECTS FOLLOWING THE TREATMENT?

Most patients experience redness and swelling immediately following the treatment. These side effects are temporary.

Q: IS THERE ANY DOWNTIME ASSOCIATED WITH THE TREATMENT?

Patients can return to regular activities immediately following the treatment.
